

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method of forming an output image in an image forming system, comprising:

scanning at least a portion of an input ~~document;~~ document containing image data, without a user pre-modifying the input document;

automatically determining a location of an ~~original~~ the at least the portion of the input document containing image ~~data;~~ data within the input document;

automatically forming a duplicate ~~input~~ image containing at least a specific portion of the ~~original~~ at least the portion of the input document containing image data ~~and excluding any surrounding white space portions~~ to exclude non-image portions of the input document;

automatically determining dimensions of the duplicate ~~input~~ image;

automatically determining the number of times the duplicate ~~input~~ image can be replicated on a single output medium based on the determined ~~dimensions that exclude the surrounding white space portions;~~ dimensions;

~~instructing the system to replicate the duplicate image the original portion of the input document;~~ and

automatically replicating the duplicate image a selected number of times up to the determined number of times to form an output image on the single output medium.

2. (Currently Amended) The method of claim 1, further comprising selecting the number of times ~~said input~~ the duplicate image is replicated to form ~~said the~~ output image on ~~said the~~ output medium.

3. (Canceled)

4. (Currently Amended) The method of claim 1, further comprising receiving user instructions to ~~duplicate~~replicate only ~~a~~the at least the specific portion of the at least the portion of the input document.

5. (Currently Amended) A method of forming an output image in an image forming system, comprising:

obtaining instructions relating to image formation;

obtaining input image data relating to an original portion of an input document containing image data, without a user pre-modifying the input document and based at least partially on ~~said~~the instructions; ~~and~~

automatically determining a location of the original portion of the input document containing image ~~data~~; data within the input document;

automatically forming a duplicate ~~input~~ image containing at least a specific portion of the original portion of the input document containing image data ~~and excluding any surrounding white space~~ to exclude non-image portions of the input document;

automatically determining dimensions of the duplicate ~~input~~ image;

automatically determining the number of times the duplicate ~~input~~ image can be replicated on a single output medium based on the determined ~~dimensions that exclude surrounding white space~~; dimensions;

forming an output image comprising only ~~said~~ the ~~duplicate input~~ image replicated one or more times on a single printing medium up to the determined number of times, as directed by ~~said~~ the instructions.

6. (Currently Amended) The method according to claim 5, wherein ~~said~~ the obtaining instructions ~~include~~includes communicating with ~~a~~ the user through a user interface and receiving user instructions to ~~duplicate~~replicate only ~~a~~the at least the specific portion of the original portion of the input document to form ~~said~~ the output image.

7. (Currently Amended) The method according to claim 5, wherein ~~said the~~ obtaining instructions ~~include~~ includes receiving instructions as to which at least specific portion of the original portion of said the input document image is to be replicated.

8. (Currently Amended) The method according to claim 5, wherein ~~said the~~ obtaining instructions ~~include~~ includes receiving instructions as to a number of ~~replications of said original portion of said input~~ times the duplicate image is to be replicated.

9. (Canceled)

10. (Currently Amended) The method according to claim 5, wherein the obtaining input image data ~~include~~ includes receiving a signal from a remote device containing ~~said the~~ input image data, document.

11. (Currently Amended) The method according to claim 5, wherein forming the output image ~~include~~ includes printing ~~said the duplicate input image~~ in a repeated fashion up to a ~~predetermined~~ the determined number of times in concurrence with said based on the instructions.

12. (Canceled)

13. (Currently Amended) The method according to claim 5, further comprising allowing a the user to specify ~~an offset for said input document~~ a location for the duplicate image on said output the single printing medium.

14. (Currently Amended) An image forming system, comprising:

an image input stage for receiving image data corresponding to at least a portion of an input document; document, without a user pre-modifying the input document;

a controller for automatically determining a location of ~~an original portion of the at least the portion of~~ the input document containing image data, automatically forming a duplicate ~~input image~~ containing at least a specific portion of the ~~original at least the portion~~ of the input document containing image data ~~and excluding any surrounding white space to~~

exclude non-image portions of the input document, and automatically determining dimensions of the duplicate ~~input~~ image;

an image multiplier for automatically determining a number of times the duplicate ~~input~~ image ~~may~~ can be formed on a printing medium substrate based on the determined ~~dimensions that exclude surrounding white space;~~ dimensions;

a control stage for selecting at least a portion of ~~said the~~ duplicate ~~input~~ image and replicating only ~~said selected the~~ portion of the duplicate image a predetermined number of times up to the determined number to form an output image; and

an image output stage for producing ~~said the~~ output image on a ~~the~~ printing medium; medium substrate.

15. (Currently Amended) The system of claim 14, wherein ~~said the~~ control stage comprises a user interface for selecting the predetermined number of times ~~said the~~ duplicate ~~input~~ image is replicated in ~~said output image on said output medium~~; the printing medium substrate.

16. (Currently Amended) The system of claim 14, wherein ~~said the~~ control stage comprises ~~a a~~ user interface for providing printing instructions.

17. (Currently Amended) The system of claim 14, wherein ~~said the~~ control stage determines the total number of ~~input duplicate~~ image replications that can be produced in ~~said output image on said output medium~~; the printing medium substrate.

18. (Currently Amended) The system of claim 14, wherein ~~said the~~ control stage ~~can automatically calculate~~ calculates a maximum number of replications of ~~said the~~ duplicate ~~input~~ image possible for ~~said a single output medium~~; printing medium substrate.
